

WELCOME to my

Portfolio

OMAR TAREK ALI MOUSSA

HELLO I'M OMAR

Hi, I'm Omar Tarek, a passionate Computer Science student with a drive to turn ideas into impactful digital solutions. I'm constantly exploring new technologies, sharpening my programming skills, and building projects that blend creativity with problem-solving. Whether it's crafting clean, efficient code or diving into complex algorithms, I thrive on challenges that push my boundaries. My goal is to grow into a well-rounded developer who can make meaningful contributions to the tech world.

EDUCATION

Zagazig University
2021-2027
computer science ENG

ITI - ALX - creativa
1 month

Zagazig university

Student

Gained hands-on experience at Zagazig University through academic projects, research, and collaborative work, applying theoretical knowledge to practical, real-world problems.

ITI and DEPI

Intern

Completed an internship at the Information Technology Institute (ITI), gaining practical experience in software development, mastering new tools and frameworks, and working on real-world projects that enhanced both technical and problem-solving skills.

Work EXPERIENCE

PERSONAL Skill

Creative Problem
Solving-Effective

Client Relationship
Management

Adaptability &
Resilience

Project #1

Developed Anab Man Game using JavaFX, designing and implementing all gameplay mechanics, UI/UX elements, and animations. The game challenges players to control Anab Man, complete objectives, and avoid obstacles, featuring smooth controls, responsive graphics, and intuitive design. Overcame challenges in performance optimization, collision detection, and interface styling by applying efficient animation cycles, modular OOP principles, and JavaFX Scene Builder. The result is a polished, fully functional game that showcases technical skill, creativity, and problem-solving, serving as a strong portfolio piece with positive peer feedback.

Project #2

Built a Clinic Management System in C with features for patient registration, appointment scheduling, and billing. Designed a menu-driven interface and applied modular programming, file handling, and input validation to ensure reliability and efficiency. The system streamlines clinic operations and highlights strong problem-solving and C programming skills.

Project #3

Designed and built a Free Fall mechanical system to study and demonstrate the physics of gravitational acceleration. The project involved constructing a precise release mechanism, integrating timing sensors, and calculating fall durations to verify theoretical equations. Overcame challenges in measurement accuracy and mechanical stability by optimizing the release system and calibrating sensors. The final model provided reliable, repeatable results, reinforcing core mechanics concepts and showcasing skills in mechanical design, problem-solving, and experimental analysis.
